

Team Projects

Fixed-Income Analysis by Lecture

Table of contents

1 Project Format	1
------------------	---

1 Project Format

Each project is designed for a team of **two or three students** and culminates in a **10–12 minute presentation** supported by a concise analyst-style exhibit package. Coding is optional; a spreadsheet is sufficient. Teams must state assumptions and conventions, cite all external sources, distinguish observed data from estimates, and explain limitations.

Unless a project states otherwise, submit presentation slides in PDF, a reproducible exhibit package, and a one-page source-and-assumptions note. Every project is graded using a **100-point rubric** shown with the project.

Lecture	Topic	Choices
1	Bond Features, Structures, Markets, and Risks	2
2	Bond Pricing, Yield Measures, and Total Return	2
3	Duration, Convexity, and Portfolio Strategies	2
4	Benchmark Spreads and Term Structure	2
5	Treasury and Corporate Debt Markets	2

Lecture	Topic	Choices
6	Bond Portfolio Construction	4
7	Interest-Rate Models	4
8	Embedded Options and Option-Adjusted Measures	4
9	Interest-Rate Futures	4
10	Credit Spread Exposure and Credit Risk Modeling	4
11	Interest-Rate Options	4

i Professional standard

Emphasize financial reasoning, tradeoffs, and a defensible recommendation. Use manageable samples and instructor-provided dated snapshots when historical market data are unavailable.
